PHASE 01 / SCOPE AND REQUIREMENTS

Scope and requirements

A defined first release keeps planning useful, understandable, and possible to verify.

Activities

Describe the three primary jobs: plan home spaces, organize a party, and choose occasion jewelry.

Specify each planner's required fields, optional preferences, supported currencies, and image rules.

Agree on response content: a summary, item or allocation cards, estimated amounts, marketplace search links, and source label.

Set the boundary clearly: estimates and search links are illustrative; the app does not promise live stock, exact prices, or vendor bookings.

Define signed-in and guest behavior, saved-plan history, privacy expectations, and accessible form interactions.

Phase outputs

Acceptance checks

Each planner has a clear input, response shape, and success condition.

Empty, oversized, or invalid inputs show understandable errors.

Users can tell generated suggestions from current marketplace data.
