PHASE 06 / FRONTEND EXPERIENCE

Frontend experience

The interface should make the next step clear on desktop and mobile, including when a request fails.

Activities

Present a clear landing page and three planner choices with responsive forms for each domain.

Collect room selections and style, event and guest details, or jewelry occasion and optional image.

Show progress while submitting; display the returned summary, estimated total, cards, provider source, and safe marketplace links.

Escape user and model-provided text before rendering it; open external search pages with safe link attributes.

Expose sign-in, registration, sign-out, account status, and saved history without breaking guest planner use.

Phase outputs

Acceptance checks

Keyboard and mobile users can complete all three planner flows.

The interface provides loading, empty, success, and error feedback.

User or model text cannot inject markup into the page.
